# 1 Section Heading

THE FIRST FEW WORDS of a new section can be typeset in a different style by using the `\newthought{...}` command. The `curie.cls` class file has five class options: three font sizes `10pt` (default), `11pt`, and `12pt`, and a switch to activate the `draft` mode or revert to `final` (default).

Customised styles for tables, captions and lists have been added, along with several typographical enhancements through the use of `parskip`, `microtype` and `lmodern`. The `hyperref` package has been loaded in the class file with some custom settings.

## 1.1 Subsection Heading

There are five class-specific commands for the preamble<sup>1</sup>. Table (1) describes these commands<sup>2</sup>. Some convenience macros such as `C`, `L`, `R`, `D[<length>]` have been provided for aligning the text within the columns of a table.

Command	Status	Description
<code>title</code>	Required	Sets the title of the document. Also accepts an optional short-title for the header.
<code>subtitle</code>	Optional	Sets the optional subtitle — basically a ‘normally’ typeset line immediately below the title.
<code>author</code>	Required	Lists the author(s).
<code>affiliation</code>	Optional	Sets a line for the affiliation. Very basic implementation currently.
<code>date</code>	Optional	Prints the provided date.

**Table 1** – This is how the captions are set for tables.

Also a `widetext` environment, for the occasions where a wider figure, table or equation needs to be included. This sizing might change slightly in the future versions.
